Environmental Monitoring by Primex

# KEEP ESSENTIAL DOORS CLOSED AND PATIENTS SAFE with Primex OneVue Sense™ Contact Closure Monitoring

*Continuous, automated monitoring of the opening and closing of two contact points protects your valuable assets and wander-prone patients*

Doors, drawers, cabinets, windows, and refrigeration units — just a small list of everyday items that **open** and **close** repeatedly inside a hospital or health system. Whether these items contain patients, critical medications, lifesaving vaccines, sensitive medical records, or simply private objects, knowing precisely when their respective containers open or close helps ensure the contained's safety, efficacy, or privacy.

The OneVue Sense™ Contact Closure Monitoring Solution continuously monitors the opening and closing "events" of two contact points, such as a door and its jamb, a window and its sill, or a drawer and its desk. If the two contact points are separated, the solution can sound an audible alarm and send a notification via phone call, text message, or email.

In addition to local alerts and remote notifications, the OneVue Sense Contact Closure Monitoring Solution provides open and close records to the cloud-based, mobile-friendly OneVue® software platform, which allows users to generate on-demand, customized reports — ideal for proof of opening or closing and audit situations.

## Key Benefits:

- **Protect Valuables:** Around-the-clock automated monitoring from OneVue Sense will ensure your stored items are inside their containers
- **Safeguard Patients:** Avoid unauthorized departures from wander-prone patients thanks to the OneVue Sense-provided early warning for security staff
- **On-The-Go Knowledge:** Stay informed about your protected people and goods no matter where you may be, giving you time to notify on-site staff regarding corrective action
- **Make Compliance Easy:** On-demand report generation from the cloud-based OneVue® software quickly proves storage and safety compliance with governing rules and regulations
- **Scaled to Fit:** The OneVue Sense Contact Closure Monitoring Solution is designed to expand to meet growing needs of healthcare facilities and other organizations of all sizes
- **Anytime, Anywhere Access:** Simply log into the OneVue software platform from any web browser to view your open and close data — no flash drives or manual downloading necessary
- **Gain Peace of Mind:** Adding OneVue Sense Contact Closure Monitoring is like adding another staff member to your team that's always keeping track of your stored valuables

**Ready to safeguard your patients and protect your valuables with the Primex OneVue Sense Contact Closure Monitoring Solution? Contact Us Today!**

### Patient Elopement is a Sentinel Event: *Prevent It*

The Joint Commission defines patient elopement as an unauthorized departure from a staffed, around-the-clock care setting — which includes the ED — that leads to death, permanent harm, or severe, temporary harm.

- 6 out of 10 persons with dementia will wander, according to the Alzheimer's Association
- Statistics indicate that in the U.S., more than 34,000 Alzheimer patients wander out of their homes or care facilities each year
- Studies show that there is a 25% fatality rate when a patient wanders and is not found within 24 hours

*Sources: U.S. Census Statistics, Annals of Long-Term Care*

Primex OneVue Sense Contact Closure Monitoring can help ensure patient safety. By knowing exactly when a door opens or closes — thanks to mobile alerts — security teams can be actively aware if, when, and where a patient is trying to leave the building. **Protect What Matters Most** — your patients.
