PREVENT COSTLY FLOODING with Primex OneVue Sense Water Leak Monitoring

Around-the-clock monitoring of leak-prone areas detects small water leaks before they turn into catastrophic, costly floods

Heating, ventilating, and air conditioning systems rely on water to help provide warm or cool air for your hospital or health system. Washing your hands with soapy water is critical for limiting the spread of diseases and promoting hygiene. Whether in front of or behind the scenes, water is essential for any healthcare facility.

However, water in unwanted places poses a severe risk to any building. The most significant consequence of a water leak is flooding, which can be catastrophic. Floods can displace patients, ruin medical equipment, and destroy building infrastructures. Precautions to prevent water leaks from turning into floods can save hospitals and health systems from paying costly repairs, losing money from out-of-commission patient beds, and spending time relocating patients to habitable areas.

The Primex OneVue Sense™ Water Leak Monitoring Solution can be the perfect precaution to protect your healthcare facility from costly floods. When placed in leak-prone areas — near HVAC systems, in boiler rooms, within maintenance closets, under sinks, etc. — the OneVue Sense Water Leak Monitoring Solution detects minuscule amounts of liquid to provide an early warning for staff members through an audible alarm and mobile notifications. This early warning, whether by phone call, text message, or email, allows staff to immediately investigate the water source and prevent a flood.

Key Benefits:

- **Prevent Costly Repairs:** Save money by preventing flood water damage and subsequent repairs to patient rooms, hallways, departments, maintenance closets, or food-service areas
- **Protect Patients:** In-hospital floods can disrupt patient care plans and force mandatory evacuations from rooms or departments; solidify care continuums and avoid the time and effort required to relocate patients with OneVue Sense Water Leak Monitoring
- **On-The-Go Awareness:** Thanks to mobile notifications, stay informed of any unforeseen water leaks no matter where you may be — giving you time to notify on-site staff to investigate
- **Smart, Connected Data:** On-demand report generation from the web-based OneVue® software quickly provides historical water leak records, which could come in handy during audit situations or insurance conversations
- **Scaled to Fit:** The OneVue Sense Water Leak Monitoring Solution is designed to expand to meet growing needs of healthcare facilities and other organizations of all sizes
- **Gain Peace of Mind:** Adding OneVue Sense Water Leak Monitoring is like adding another staff member to your team that's always keeping an "eye" on leak-prone areas

Ready to add protection from costly floods at your healthcare facility with the Primex OneVue Sense Water Leak Monitoring Solution? Contact Us Today!

In-Hospital Floods: Costs Beyond Capital

Undetected water leaks and their ensuing floods can cost your hospital more than just money. Continuous, automated Water Leak Monitoring from OneVue Sense can prevent:

- Thought, direction, and the physical effort to relocate patients to dry areas
- Decreased patient satisfaction scores and subsequent lower reimbursement rates
- Negative media attention
- Damaged public reputation

Primex OneVue Sense Water Leak Monitoring can protect your hospital or health system from water leaks that turn into costly floods. Receive early warning and take corrective action to save your facility from flood damage and its multitude of repercussions.
